

HEET CHOKSHI

Software & DevOps Engineer

iamheetchokshi@gmail.com · +91 90996 66950 · github.com/iamheet · Ahmedabad, Gujarat

PROFESSIONAL SUMMARY

Software & DevOps Engineer with hands-on experience deploying and managing production infrastructure on AWS EC2, configuring Nginx reverse proxies, containerising applications with Docker, and building CI/CD pipelines using GitHub Actions. Skilled in Linux server administration, application monitoring with Prometheus and Grafana, and container orchestration with Kubernetes. Also brings full-stack development capability across Node.js, React.js, and Next.js — enabling end-to-end ownership from code to cloud. Experienced integrating OpenAI APIs and Supabase, and comfortable using AI-assisted tooling to accelerate development workflows.

TECHNICAL SKILLS

Cloud & Infra	AWS EC2, Microsoft Azure, Linux server administration, SSH, environment management
Containers	Docker (build, run, Dockerfile, image optimisation), Kubernetes (kubectl, namespaces, config maps, deployments)
CI/CD	GitHub Actions (build, test, deploy pipelines), automated rollouts
Networking	Nginx (reverse proxy, routing, HTTPS termination), DNS basics
Observability	Prometheus (metrics scraping, exporters), Grafana (dashboards, alerting)
Backend & APIs	Node.js, Express.js, REST APIs, JWT Authentication, MVC Architecture
Frontend	React.js, Next.js, HTML5, CSS3
Databases	MongoDB, MySQL, PostgreSQL, Supabase
Languages	JavaScript (ES6+), TypeScript, Python, SQL, Bash
Tools & AI	Git, GitHub, Postman, VS Code, OpenAI API, GitHub Copilot

PROFESSIONAL EXPERIENCE

Software & DevOps Engineer
Softedge Infotech · Ahmedabad, Gujarat

Oct 2025 – Feb 2026

Infrastructure & DevOps

- Provisioned and managed AWS EC2 instances for application hosting, handling instance setup, security group configuration, SSH key management, and environment variable provisioning for multiple deployed services.
- Configured Nginx as a reverse proxy across production environments, writing server blocks to route traffic to Node.js backends and Next.js frontends, managing HTTP-to-HTTPS redirects and upstream definitions.
- Containerised application services using Docker, writing Dockerfiles with multi-stage builds to minimise image size, and managing container lifecycles across development and production environments.

- Built and maintained CI/CD pipelines using GitHub Actions, automating build, lint, and deployment workflows — reducing manual deployment steps and enabling consistent, repeatable releases on every merge to main.
- Administered Linux servers for day-to-day operational tasks: monitoring system resources (top, htop), managing services (systemctl), diagnosing connectivity issues (ss, curl), and maintaining log rotation and disk health.

Application Development

- Delivered full-stack application features using React.js and Node.js/Express, owning complete feature cycles from API design and database integration through to frontend implementation.
- Integrated MySQL and MongoDB database layers into backend services, writing schema definitions, migrations, and query optimisations that supported core product workflows.
- Collaborated across teams on code reviews and debugging sessions, maintaining shared coding standards and contributing to a cleaner, more maintainable codebase.

PROJECTS

CryptoNexusAI — AI Analytics Dashboard | *Next.js · OpenAI API · Docker · Nginx · AWS EC2*

- Developed an AI-powered cryptocurrency analytics dashboard integrating the OpenAI API for automated market insights and natural language queries on live price and trend data.
- Containerised the Next.js application using Docker and deployed it on an AWS EC2 instance, configuring Nginx as a reverse proxy to handle HTTPS termination and route public traffic to the container.
- Built server-side API routes in Next.js to orchestrate OpenAI requests, implementing response caching to reduce redundant API calls and keep usage within cost limits.
- Implemented token streaming from the OpenAI API to the client, progressively rendering AI-generated content and reducing perceived response latency significantly.
- **Live:** crypto-nexus.in

RoyalStay — Hotel Booking Platform | *Node.js · Express.js · MongoDB · React.js · Microsoft Azure*

- Architected a full-stack hotel booking platform with JWT-based authentication, end-to-end booking workflows, and role-based access for guests and administrators.
- Designed RESTful APIs and MongoDB schemas covering hotel listings, availability, reservations, and user profiles — supporting the complete booking lifecycle from search to confirmation.
- Deployed on Microsoft Azure, configuring cloud hosting, environment variables, and network settings for a production-accessible environment.
- **Live:** royalstay.me

LearnWithH — Financial Blog Platform | *React.js · Supabase*

- Built a financial content platform using Supabase for authentication, PostgreSQL-backed database, and edge hosting, eliminating the need for a standalone backend service.
- Implemented Supabase Auth workflows with protected frontend routes and designed a responsive React.js UI optimised for long-form content readability across devices.

EDUCATION

Bachelor of Technology — Computer Science & Engineering

2022 – Present

Indrashil University, Kadi · SGPA: 7.0 / 10

- Relevant coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, Web Technologies

ADDITIONAL

- Working toward AWS Cloud Practitioner certification — covering IAM, S3, RDS, VPC, and CloudWatch fundamentals.
- Uses Prometheus + Grafana to build monitoring dashboards for containerised services, tracking CPU, memory, request rates, and error budgets.

- Familiar with Kubernetes day-to-day operations: deploying workloads, managing namespaces, applying config maps, and debugging pods via kubectl logs and describe.
- Exploring Helm charts and ingress controllers as next steps in Kubernetes workflow maturity.
